

HOW TO CLEAN & MAINTAIN YOUR **BRASS POLE**

X-POLE brass pole sets require regular cleaning and maintenance for optimum grip and usability. Below you will find a simple 4-step guide on how to get the most from your brass pole set.

NO LIQUIDS

It is essential not to use any liquid on your brass finish X-POLE, as brass is a porous metal, which means it absorbs liquid.

DRY CLOTH

To clean your pole between uses, use a clean and dry microfiber cloth.

OXIDISATION

Over time, brass will fade and can become dull due to oxidation. This is entirely normal, but to keep your pole shining like new, we recommend polishing your pole once a month with oil-free metal polish. Using oil-free metal polish will bring the pole up like new and remove any surface contaminants the cloth may have missed.

STEP AND REPEAT

Suppose you have previously cleaned your brass pole with a liquid such as alcohol or anti-bacterial spray. In that case, you may need to polish the pole a few times to get it shining like new.
